Inglés técnico I

Software Development

TEXT ANALYSIS

Text 1: A DIGITAL BOOM

Multimedia enhances the way people work, learn, play, and most importantly, communicate. It is not a new medium, but rather old individual media that have come to life together in new **formats** on new **devices** and for new personal uses. There are many lessons that the print world, storytelling, music and film production can offer about how to make multimedia work as a unified interactive **experience.**

You are probably involved with multimedia in some way. Many of you may be developing multimedia as an extension to your existing work, for example in software development, or consulting. Other people are on the periphery of the multimedia industry; they are vendors, distributors, and information providers in publishing, music, art, and education.

Something extraordinary is happening on a global **scale**. Five mega-industries (personal computing, consumer electronics, publishing, entertainment, and telecommunications) are converging.

This merging of different disciplines is amazing. For the first time, we use a common format. Today, the information for each one of these industries is available in digital **formats**, stored in bits and bytes. Almost everything we see on TV, read in print, view at the theatre, and receive over wires or airwaves is easily accessible and available anywhere, at any time. We are experiencing a digital boom!

One of the great challenges with this array of digital information is to provide interfaces and searching mechanisms that allow people to select this information. Multimedia represents intuitive and realistic ways for people to sort through this digital web - to represent this "content" to **consumers** who are not programmers or "digital scientists". It also represents ways for people to customize their interaction with the digital **world** so that the **information** they receive through their senses makes the most sense to them - be it aural, visual, tactile, kinetic, or a **combination** of these. Think of multimedia as an enhancement to the way people communicate.

1. Determine if the following sentences are True (T) or False (F)

- Multimedia is a completely new medium that has never existed before.
- The print world, storytelling, music, and film production have nothing to contribute to multimedia.
- Many people are involved in multimedia either as developers or as part of related industries.
- The convergence of different industries is leading to a digital boom.
- Digital information is only available in physical formats like books and CDs.
- Multimedia helps people interact with digital information in ways that suit their senses.

2. Answer the following questions based on the text:

1. Which five industries are merging due to digital technology?

2. What is one major challenge of digital information mentioned in the text?
3. In what ways does multimedia help people interact with digital content?
4. According to the text, who are some of the people involved in multimedia besides developers?

3 . Nouns, adjectives or verbs?

a) What types of words are underlined? _____

b) What types of words are **highlighted**? _____

c) What types of words are in **bold**? _____

4. Put the words into the correct parts of speech category.

big moved sat good old quickly slowly woman rain dog quietly red

writes worked little runs child noisily car cold fell sister badly hard

Verbs	Nouns	Adjectives	Adverbs

5. Translate these sentences. The first sentence in each group is from the text above:

1- a) Multimedia enhances the way people work, learn, play, and most importantly, communicate.

b) The play we saw at the theatre last Saturday was brilliant.

2. a)This merging of different disciplines is amazing.

b) We need to discipline these new students.

3. a)For the first time, we use a common format.

b) The use of new technologies encourages people to work in a different way.

4. a) Almost everything we see on TV, read in print, view at the theatre, and receive over wires or airwaves is easily accessible and available anywhere, at any time.

b) The view from my hotel room is amazing.

Text 2: THE DIGITAL AGE

Computers have become an essential part of our lives. Young people who have grown up with PCs and mobile phones are often called *the digital generation.* Computers help students to **perform mathematical operations** and improve their maths skills. They are used to **access the Internet,** to **do** basic **research** and to communicate with other students around the world.

Teachers use projectors and interactive whiteboards to **give presentations** and teach sciences, history or language courses. PCs are also used for administrative purposes - schools use word processors to write letters, and databases to **keep records** of students and teachers. A school website allows teachers to publish exercises for students to complete online.

Students can also enrol for courses via the website and parents can download official reports. Mobiles let you make voice calls, send texts, email people and download logos, ringtones or games. With a built-in camera you can send pictures and make video calls in *face-to-face* mode. New smartphones combine a telephone with web access, video, a games console, an MP3 player, a personal digital assistant (PDA) and a GPS navigation system, all in one.

In banks, computers **store information** about the money held by each customer and enable staff to access large **databases** and to **carry out** financial **transactions** at high speed. They also control the cashpoints, or ATMs (automatic teller machines), which dispense money to customers by the use of a PIN-protected card. People use a Chip and PIN card to pay for goods and services. Instead of using a signature to **verify payments**, customers are asked to enter a four-digit personal identification number (PIN), the same number used at cashpoints; this system makes transactions more secure. With online banking, clients can easily **pay bills** and **transfer money** from the comfort of their homes.

Airline pilots use computers to help them control the plane. For example, monitors display data about fuel consumption and weather conditions.

In airport control towers, computers are used to **manage radar systems** and regulate air traffic. On the ground, airlines are connected to travel agencies by computer. Travel agents use computers to find out about the availability of lights, prices, times, stopovers and many other details.

REMEMBER

When you read a text, you will often see a new word that you don't recognize. If you can identify what type of word it is (noun, verb, adjective, etc.) it can help you guess the meaning.

1. Find the words (1-10) in the text above. Can you guess the meaning from context? Are they nouns, verbs, adjectives or adverbs? Write *n, v, adj* **or** *adv* **next to each word.**

1. perform .....
2. digital .....
3. word processor .....
4. store .....
5. online .....
6. financial .....
7. download .....
8. monitor .....
9. built-in .....
10. data .....

2. Match the words in (1-10) above with the correct meanings (a-j) below.

A. keep, save _____

B. execute, do _____

C. monetary _____

D. screen _____

E. integrated _____

F. connected to the Internet _____

G. collection of facts or figures _____

H. describes information that is recorded or broadcast using computers _____

I. program used for text manipulation _____

J. copy files from a server to your PC or mobile _____

COLLOCATIONS. ***What are they?***

A collocation is a natural combination of words that native speakers often use together. They "sound right" because they frequently appear side by side in everyday language. These word pairings become familiar through repeated use, and while they may follow grammatical rules, their real strength lies in sounding natural and fluent.

Collocations can be made up of different types of words—verbs with nouns, adjectives with nouns, or adverbs with verbs. Learning them helps you avoid awkward or unnatural phrasing and makes your English smoother, more confident, and more like that of a native speaker.

Some examples of collocations are:

- **Verb + noun**: *take a shower, have lunch. Do research, display data*
- **Adjective + noun**: *strong coffee, deep sleep*
- **Adverb + verb**: *deeply regret, strongly recommend*
- **Noun + noun**: *traffic jam, data analysis*

LET'S PRACTICE!

1. Match the verbs (1–5) with the nouns (a–e) to make collocations from the text "The digital age."

1. Give	**A.** money
2. Keep	**B.** a PIN
3. Access	**C.** databases
4. Enter	**D.** Presentations
5. Transfer	**E.** Records

1. Thanks to Wi-Fi, it's now easy to _____ from cafes, hotels, parks and many other public places.
2. Online banking lets you _____ between your accounts easily and securely.
3. Skype is a technology that enables users to _____ over the Internet for free.
4. In many universities, students are encouraged to _____ using PowerPoint in order to make their talks more visually attractive.
5. The Web has revolutionized the way people _____ with sites such as Google and Wikipedia; you can find the information you need in seconds.
6. Cookies allow a website to _____ on a user's machine and later retrieve it; when you visit the website again, it remembers your preferences.
7. With the latest mobile phones, you can _____ with multimedia attachments – pictures, audio, even video.

IT AND IT JOBS

💻 What is Information Technology (IT)?

Information Technology (IT) involves using computers, software, networks, and systems to manage and process information. IT is an essential part of almost every industry today—from healthcare and education to finance and entertainment.

As technology keeps growing, so does the need for professionals who can work with it effectively!

Here are some of the most popular and in-demand jobs in the IT field:

Job title	What they do
Software Developer	Designs and builds apps and computer programs
Web Developer	Creates and maintains websites
IT Support Technician	Helps users fix technical issues
Network Administrator	Manages and sets up computer networks
Cybersecurity Specialists	Protects systems from hackers and cyber threats
Database Administrator	Organizes and manages large collections of data
Data Analyst	Studies data to help businesses make smart decisions

Discussion:

1. Which IT job sounds the most interesting to you? Why?
2. Do you think IT skills are useful in non-technology jobs?
3. What kind of technology do you use every day?

1. Listen to this dialogue and choose the correct options. *(TRACK 3)*

Kathryn: Karim, what do you do?

Karim: I'm a (1) **website developer/network administrator**. Who do you work for?

Kathryn: I work for CISCO. I 'm a (2) **system analyst/website analyst** there. Where are you from, Karim?

Karim: I'm from Kuwait. I work for Microsoft there. And where are you from, Kathryn?

Kathryn: I'm from the (3) **UK/US** but now I live in Qatar. Do you know where Glenda is from?

Karim: She's from the US.

Kathryn: And what's her job?

Karim: She works for (4) **IBM/Dell**. Her job is to set up new systems.

2. Listen to three people talking about their jobs. Complete these job descriptions. *(TRACK 5)*

1 Karl

Job: software _____

Responsibilities: he designs and _____ computer games.

2 Heba

Job: _____ analyst

Responsibilities: he _____ computer problems.

3 Wojtek

Job: database _____

Responsibilities: he analyses and _____ electronic data.

GRAMMAR: SIMPLE PRESENT

We use the Simple present to:

- ✓ Talk about general truths
  - A computer **is** an electronic machine.
  - A computer system **consists** of two parts: hardware and software.
  - The computer **shows** the output on the monitor or **prints** the results onto paper by means of a printer.
  - A lot of people today **have** access to a computer.
- ✓ Write definitions:
  - A computer **is** an electronic machine. It accepts data in a certain form, process the data, and gives the results of the processing in a specified format as information.
- ✓ Talk about routines / things we do regularly:
  - I **get up** at 5, have a shower, **take** the bus and **go** to work. I **don't have** breakfast.
  - I **don't have** a computer at home. **Do** you **have** a computer in your house?
  - **A:** My partner **has** a new laptop. **B: Does** she **use** it to work**?** No, she **doesn't.**

FORM: we distinguish between first and second person singular (I, you), the first, second and third person plural (we,you,they) and the third person singular (he, she it) in ALL forms (affirmative, negative and interrogative)

SUBJECTS	AFFIRMATIVE FORM
I, you, we, they	1. A lot of people today **have** access to a computer 2. They usually **show** us the new changes of the project every morning in the daily meetings. 3. Computers are electronic machines that **process** data. 4. Computers **carry out** different tasks.
he, she, it	1. Only Mr Jhonson **has** access to these files. 2. The computer **shows** the output on the monitor… 3. The CPU **processes** and executes program instructions and coordinates the activities of all the other units. 4. Tom, in the financial department, **carries out** one particular task; that is controlling budgets.

SUBJECTS	NEGATIVE FORM
I, you, we, they (DO NOT + VERB) Don´t	1. A lot of people today …… access to a computer 2. They …… us the new changes of the project every morning in the daily meetings.
he, she, it (DOES NOT + VERB) Doesn´t	3. Mr Jhonson …….. access to these files. 4. Tom, in the financial department ……..one particular task. He is in charge of many things.

SUBJECTS	INTERROGATIVE FORM
(DO + I, you, we, they + VERB?)	1. …….. a lot of people today …… access to a computer? (have) 2. …….. they …… us the new changes of the project every morning in the daily meetings? (show)
(DOES + he, she, it + VERB?)	3. ……. Mr Jhonson …… access to these files? (have) 4. ……. Tom, in the financial department, ……..one particular task. He is in charge of many things? (have)

<u>"S" or "-ES" Endings</u>

Most verbs only add "-s"	Live → liveS / plug → plugS / read → readS / Play → playS / obey → obeys
Verbs finished in **–sh, -ch, -s , -ss , -o, -x** add "-es"	Finish → finishES / pass → passES / fix → fixES
Verbs finished in **C + y** change Y for I and add "-es"	Tidy → tidIES / try → trIES / carry → carrIES

PRACTICE

1. Use the verbs to make present simple sentences in the affirmative form.

0. Sophie _____**GOES**_____ (go) to school every day.

1. I _____ (be) in a café now.

2. They _____ (go) to the cinema every Wednesday.

3. You _____ (find) the weather here cold.

4. Lucy _____ (ride) her bicycle to work.

5. I _____ (play) the piano.

6. We _____ (be) from Portugal.

7. He _____ (work) as a Software Development.

2. Turn the sentences in exercise 1 into negative.

0. Sophie ____**DOESN'T GO**_____ (not / go) to school every day.

1. I _____ (not / be) in a café now.

2. They _____ (not / go) to the cinema every Wednesday.

3. You _____ (not / find) the weather here cold.

4. Lucy _____ (not / ride) her bicycle to work.

5. I _____ (not / play) the piano.

6. We _____ (not / be) from Portugal.

7. He _____ (not / work) as a Software Development.

3. Ask and answer the following yes/no questions

1. _____ (she / play) tennis every week? Yes, ……

2. _____ (she / be) a singer? No, …….

3. _____ (they / be) on the bus? Yes, …….

4. _____ (we / make) too much noise at night? No, ……

5. _____ (it / be) foggy today? No, ……..

6. _____ (the dog / eat) chicken? Yes, ……..

4. In pairs, make questions using these prompts. Then practice asking and answering the questions.

Example: When / you / normally / use the Internet → When do you normally use the Internet?

a. What type of internet connection / you / have at home?

b. How fast / internet / work?

c. How much / you / pay for /cell phone service?

d. How often / study / using the Internet?

e. Which email program / you / use?

f. you / use your mobile phone to access the Internet?

g. you / use the Internet in public spaces using Wi-Fi?

h. you / play games online?

Listen to two people at an IT conference. Complete this dialogue. *(TRACK 8)*

Penelope:	Hi, Don. (1) _____ are you?
Don:	I'm (2) _____ thanks, Penelope. And you?
Penelope:	I'm OK. Bit tired from the flight.
Don:	Right.
Penelope:	(3) _____ workshop (4) _____ you want to attend today, Don?
Don:	I want to go to the CISCO network security workshop.
Penelope:	Sounds interesting. What time does it start?
Don:	It (5) _____ at 9.15.
Penelope:	And (6) _____ does it finish?
Don:	It (7) _____ at 4.00 in the afternoon.
Penelope:	Well, I (8) _____ to attend the Microsoft Windows Applications workshop. It (9) _____ at 8.30 am and (10) _____ at 6.00 pm. But they have two breaks, at 10.30 and 12.45.
Don:	That's good.
Penelope:	Hope you enjoy your session.
Don:	You too. See you around.

INPUT DEVICES

The computer. The keyboard. The mouse

Read the text and underline verbs in paragraphs 1 and 2; circle adjectives in paragraphs 3 and 4.

What is a computer?

1-A computer is an electronic machine which can accept data in a certain form, process the data, and give the results of the processing in a specified format as information.

First, data is fed into the computer's memory. Then, when the program is run, the computer performs a set of instructions and processes the data. Finally, we can see the results (the output) on the screen or in printed form

(See Figure below).

2- A computer system consists of two parts: hardware and software. Hardware is any electronic or mechanical part you can see or touch. Software is a set of instructions, called a program, which tells the computer what to do. There are three basic hardware sections: the central processing unit (CPU), main memory and peripherals

3- Perhaps the most influential component is the central processing unit. Its function is to execute program instructions and coordinate the activities of all the other units. In a way, it is the 'brain' of the computer. The main memory (a collection of RAM chips) holds the instructions and data which are being processed by the CPU. Peripherals are the physical units attached to the computer. They include storage devices and input/ output devices

4- Storage devices (hard drives, DVD drives or flash drives) provide a permanent storage of both data and programs. Disk drives are used to read and write data on disks. Input devices enable data to go into the computer's memory. The most common input devices are the mouse and the keyboard. Output devices enable us to extract the finished product from the system. For example, the computer shows the output on the monitor or prints the results onto paper by means of a

Printer

5- On the rear panel of the computer there are several ports into which we can plug a wide range of peripherals - a modem, a digital camera, a scanner, etc. They allow communication between the computer and the devices. Modern desktop PCs have USB ports and memory card readers on the front panel.

A USB port

A USB connector

Answer:

1. What is a computer, and what are its main functions?
2. What are the two main parts of a computer system?
3. What is the central processing unit (CPU), and why is it important?
4. What are peripherals, and what role do they play in a computer system?
5. What are the common input devices mentioned in the text?
6. How do output devices help in the functioning of a computer?

1. Match the following words from the text (1-9) to their meanings (a-i)

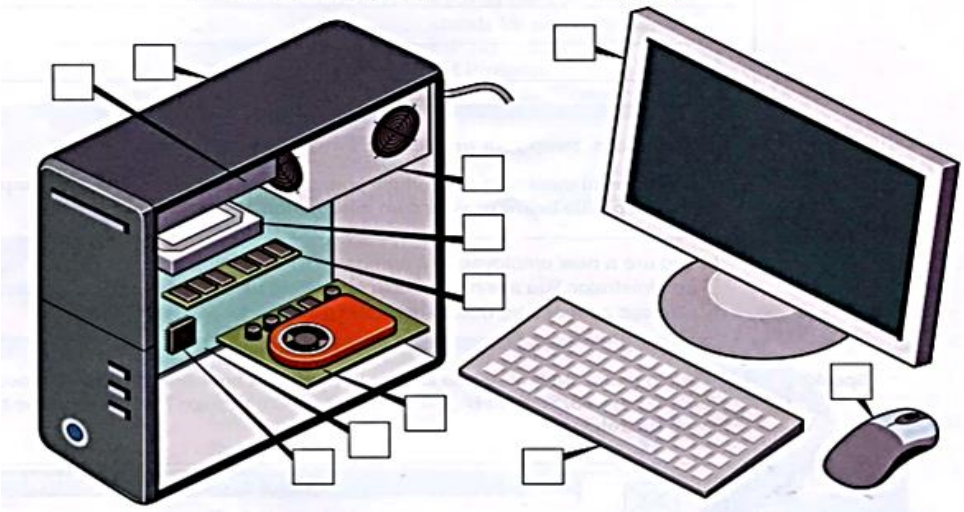
1. Software
2. Peripherals
3. Main memory
4. Hard drive / hard disk
5. Hardware
6. Input
7. Ports
8. Output
9. Central Processing Unit (CPU)

a. The brain of the computer
b. Physical parts that make up the computer system
c. Programs which can be used on a particular computer system
d. The information which is presented to the computer
e. Results produced by a computer
f. Input devices attached to the CPU
g. Section that hold programs and data while they are executed or processed
h. Magnetic device used to store information
i. Sockets into which an external device may be connected

What is inside a PC system?

Vocabulary 2 Label the diagram with the correct items 1–11.

1 monitor
2 case
3 motherboard
4 CPU (Central Processing Unit or Processor)
5 main memory (RAM)
6 expansion cards (video, graphic)
7 power supply unit
8 optical disk drive
9 hard disk drive
10 keyboard
11 mouse



Processing

The nerve centre of a PC is the **processor**, also called the **CPU,** or central **processing unit**. This is built into a single chip which executes program instructions and coordinates the activities that take place within the computer system. The chip itself is a small piece of silicon with a complex electrical circuit called an **integrated circuit.**

The processor consists of three main parts:

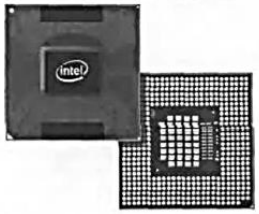
■ The **control unit** examines the instructions in the user's program, interprets each instruction and causes the circuits and the rest of the components - monitor, disk drives, etc. - to execute the functions specified.

■ The **arithmetic logic unit** (ALU) performs mathematical calculations (+, etc.) and logical operations (AND, OR, NOT).

■ The **registers** are high-speed units of memory used to store and control data. One of the registers (the program counter, or PC) keeps track the next instruction to be performed in the main memory. The other (the instruction register or IR) holds the instruction that is being executed.

The power and performance of a computer is partly determined by the speed of its processor. A **system clock** sends out signals at fixed intervals to measure and synchronize the flow of data. **Clock speed** is measured in **gigahertz** (GHz).

For example, a CPU running at 4GHz (four thousand million hertz, or cycles, per second) will enable your PC to handle the most demanding applications.



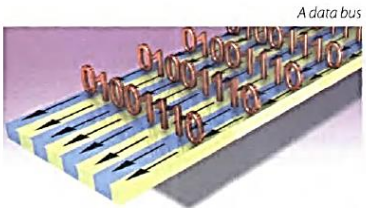
The Intel Core 2 Duo processor; other chip manufacturers are AMD and Motorola

RAM and ROM

The programs and data which pass through the processor must be loaded into the main memory in order to be processed. Therefore, when the user runs a program, the CPU looks for it on the hard disk and transfers a copy into the RAM chips. RAM (random access memory) is volatile - that is, its information is lost when the computer is turned off. However, ROM (read only memory) is non-volatile, containing instructions and routines for the basic operations of the CPU. The BIOS (basic input/output system) uses ROM to control communication with peripherals.

RAM capacity can be expanded by adding extra chips, usually contained in small circuit boards called dual in-line memory modules (DIMMs).

Buses and cards



The main circuit board inside your system is called **the motherboard** and contains the processor, the memory chips, expansions slots, and controllers for peripherals, connected by **buses** - electrical channels which allow devices inside the computer to communicate with each other. For example, the front side bus carries all data that passes from the CPU to other devices.

The size of a bus, called **bus width,** determines how much data can be transmitted. It can be compared to the number of lanes on a motorway - the larger the width, the more data can travel along the bus. For example, a 64-bitbus can transmit 64 bits of data.

Expansion slots allow users to install **expansion cards,** adding features like sound, memory and network capabilities.

GRAMMAR: RELATIVE PRONOUNS

We use relative pronouns to make reference to a person, object or place named previously in a text. The most common ones are: Who, Which, Where and That.

Who: We use this relative pronoun to refer to people. It is used as the subject of the sentence. It can be replaced by "that".

A blogger is a person **who/that** keeps a web log (blog) or publishes an online diary.

Which: we use "which" to talk about objects and animals. . It is used as the subject of the sentence. It can be replaced by "that".

The book **which** I read last week is very interesting.

This is built into a single chip **which/that** executes program instructions and coordinates the activities that take place within the computer system.

Where: we use it to refer to places. It is used as the subject of the sentence. It CAN'T be replaced by "that".

The hotel **where** we spent our honeymoon has been demolished.

1. **Complete the sentences below with suitable relative pronouns. Give alternative options if possible.**

a) That's the computer..... ..... I'd like to buy.

b) Core 2 Duo is a new Intel processor ……contains about 291 million transistors.

c) A webmaster is a person..... .... designs, develops and maintains a website.

d) A bus is an electronic pathway carries signals between computer devices.

e) Here's the DVD …….. you lent me!

f) Last night I met someone.....works for GM as a software engineer.

Interacting with your computer

Input devices are the pieces of hardware which allow us to enter information into the computer. The most common are the **keyboard** and the **mouse.** We can also interact with a computer by using one of these: **a scanner**, a **graphics tablet**, a **gamepad** or a **microphone.**

What's this? Read the descriptions and write the name of the device. Then, Translate de texts.

1. _____

This device is used to enter information into the computer. As well as having normal typewriter keys for characters and a numeric keypad, it may have function keys and editing keys for special purposes.

2. _____

This is a device for controlling the cursor and selecting items on the screen. The ball underneath is rolled in any direction across the surface of a desk to move the cursor on the screen. It may have an optical sensor instead of a ball. It usually features 2 buttons and a wheel. *By clicking* the button, the user can activate icons or select items and text. A wireless version works without cables.

3. _____

It is used for commands in games, to give and control orders while playing a game. With this object we can control all movements needed to perform actions.

Describing functions:

In the text, the mouse was described using **for + gerund:**
This is a device **for controlling** the cursor and selecting items on the screen.

There are other ways of describing a device's function:

- **used + to + infinitive**
  It's used to control
- **relative pronoun + verb**
  This is a device which controls ...
- **relative pronoun + used + to + infinitive**
  This is a device which/that is used to control
- **work by + gerund**
  It **works by detecting** light from the computer screen.

We can describe features like this:

-An optical mouse **has** an optical sensor instead of a ball underneath.
-It usually **features** two buttons and a wheel.

-You **can** connect it to a USB port.

-A wireless mouse **works/operates** without cables.

-It **allows** the user **to** answer multiple-choice questions and...

Look at the different devices. Explain their functions and features by using the expressions below:

- ✓ It has… / It uses…. / It includes…/It features…
- ✓ This is a device that/which…
- ✓ This device is used to…
- ✓ We use this device for…

WEBCAM

Record moving pictures, record sounds, record in real time, built-in in portable computers, USB cable, transmit sounds and images through the internet, popular in videoconferences social recording videos and security surveillance.

***This device is used for recording moving pictures and sounds in real time. It is built-in in portable computers; its connection is by a USB cable. We use this gadget for transmitting sounds and images through internet, also is popular* in videoconferences social recording videos and security surveillance.**

BARCODE READER

A hand-held device, read printed barcodes; decode the bars, a light sensor, a lens, a decoder for analysing the barcode's image.

_____

_____

_____

_____

MICROPHONE

_____

_____

_____

_____

THE KEYBOARD

1. **Label the picture of a standard keyboard with the groups of keys (1 -5).**

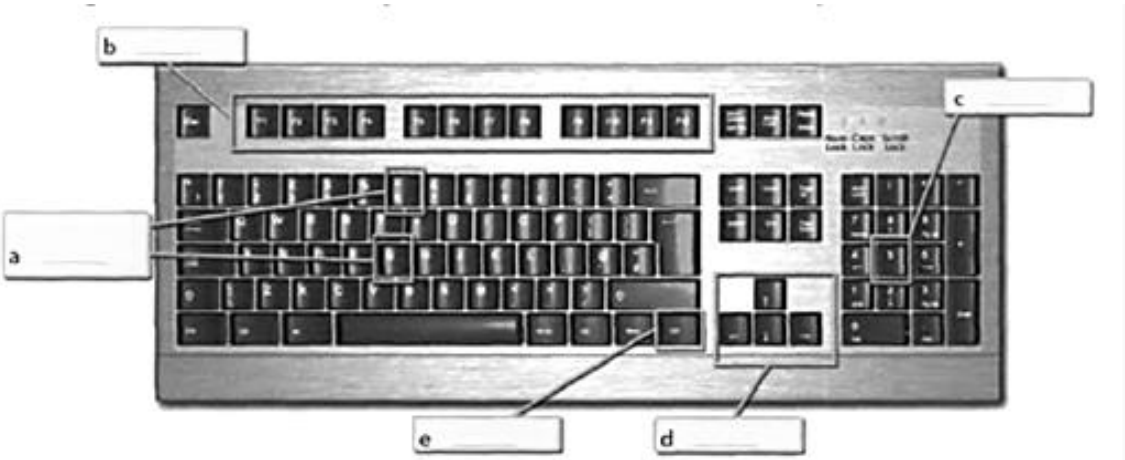
1. **Cursor control keys** include arrow keys that move the insertion point up, down, right and left, and keys such as *End, Home, Page Up* and *Page Down,* which are used in word processing to move around a long document.

2. **Alphanumeric keys** represent letters and numbers, as arranged on a typewriter.

3. **Function keys** appear at the top of the keyboard and can be programmed to do special tasks.

4. **Dedicated keys** are used to issue commands or to produce alternative characters, e.g. the *Ctrl* key or the *Alt* key.

5. A **numeric keypad** appears to the right of the main keyboard. The *Num Lock* key is used to switch from numbers to editing keys.



2. **Match the descriptions (1-8) with the names of the keys (a-h). Then find them on the keyboard.**

1. A long key at the bottom of the keyboard. Each time it is pressed, it produces a blank space.
2. It moves the cursor to the beginning of a new line. It is also used to confirm commands.
3. It works in combination with other keys. For example, you press this key and C to copy the selected text.
4. It removes the character to the left of the cursor or any selected text.
5. It produces UPPER CASE characters.
6. It produces UPPER CASE letters, but it does not affect numbers and symbols.
7. It moves the cursor horizontally to the right for a fixed number of spaces (in tabulations and data fields).
8. They are used to move the cursor, as an alternative to the mouse.

a) tab
b) space bar
c) backspace
d) ctrl
e) arrow keys
f) return/enter
g) Caps Lock
h) shift

MOUSE ACTIONS

1. Complete this text about the mouse with verbs from the box.

click *double-click* *drag* *grab* *select* *move* *control*

A mouse allows you to **(1)** ..... the cursor and move around the screen very quickly. Making the same movements with the arrow keys on the keyboard would take much longer. As you **(2)** ……. the mouse on your desk, the pointer on the screen moves in the same direction. The pointer usually looks like an l-bar, an arrow, or a pointing hand, depending on what you are doing.

A mouse has one or more buttons to communicate with the computer. For example, if you want to place the insertion point or choose a menu option, you just **(3)** …… (press and release) on the mouse button, and the option is chosen.

The mouse is also used to **(4)** …… text and items on the screen. You can highlight text to be deleted, copied or edited in some way. The mouse is widely used in graphics and design. When you want to move an image, you position the pointer on the object you want to move, press the mouse button, and **(5)** …… the image to a new location on the screen. Similarly, the mouse is used to change the shape of a graphic object. For example, if you want to convert a square into a rectangle, you **(6)** ……... one corner of the square and stretch it into a rectangle.

The mouse is also used *to* start a program or open a document: you put the pointer on the file name and **(7)** …… on the name - that is, you rapidly press and release the mouse button twice.

SCANNERS

Flatbed Scanners

Flatbed scanners are some of the most commonly used scanners because they have both home and office functions. The way they scan documents is that a mechanism rolls under the document to obtain the image. For businesses that have a need for high processing abilities, the flatbed scanner can scan any number of documents with a click of a button.

Sheet-Fed Scanners

This type of scanner works like a flatbed scanner except that the image is fed through the scanner and moves along the **beam** to be read rather than the beam moving. This type is not **useful** for books, but only single sheets. They are the most common types of scanners used in homes and small offices.

Integrated Scanners

Integrated scanners are becoming one of the most modern types of scanners when it comes to obtaining images. ATMs feature this type of built-in scanner for check-processing and approval.

Drum Scanners

These types of scanners are used mainly for capturing a picture and producing at a very high resolution rate. There are only a few companies that make these scanners, considering the high cost of producing them. It is considered as a tremendous upgrade to a regular flatbed scanner.

Portable Scanners

Portable scanners are designed to capture text and other data while you are on the go. The scanner is powered by batteries and once you scan the text, the content is stored on the portable scanner. Once you get home, you can transfer the content to a computer. Transferring to your computer is done by using a cable or a wireless connection.

1. Read a conversation between Vicky Cameron, an Information Technology (IT) lecturer, and one of her students, and complete the student's notes below.

Student: What sort of technology is used in scanners?

Vicky: Well, a scanner is a bit like a photocopier. You put the image you want to copy face down on the **glass plate** of the scanner, start the program, a **laser beam** reads the image in horizontal lines. This image is then sent to the computer where you can see it, and then manipulate it as you want.

Student: What about text? Can you scan text?

Vicky: Yes, you can, but you need special software called OCR – optical character recognition. This interprets the text letter and **enables** the computer to recognize the characters.

Student: Why do people need to scan text?

Vicky: Well, text that's been scanned can be stored as data in databases, or edited with a word processor.

Student: Um, ok. What types of scanners are there?

Well there are 3 basic types: flatbed scanners, slide scanners and hand-held scanners. Flat-bed scanners are similar to a photocopier and are for using on a desktop. They can scan text, color pictures, and even small three-dimensional objects. They are very convenient and versatile. Slide scanners are used to scan 35mm slides or film negatives. They work at very high resolution, so they're *more expensive than* flatbeds. Hand-held scanners are small, compact and in a flatbed, they can only copy images up to about four inches wide. They're used for capturing small pictures and logos.

- The technology used in scanners is similar to that used in a _____.
- The scanned image is sent to the _____, where you can manipulate it.
- To scan text, you need special software called _____.
- Flatbed scanners can scan _____.
- Slide scanners are used to scan _____ or film negatives.
- Handheld scanners are used for capturing _____.

GRAMMAR: COMPARATIVE AND SUPERLATIVE ADJECTIVES

When talking about devices and their characteristics, we usually make comparisons. In English we use ADJECTIVES to compare things. Depending on how many things we compare and the length of the adjective we may need to use the COMPARATIVE or SUPERLATIVE form on the adjectives.

Comparative adjectives

We use comparative adjectives to talk about one thing in relation to another one.

SHORT ADJECTIVES	EXAMPLES
fast, slow, rich, small, smart, cheap, clean **+ er + than**	A Ferrari is faster than my car. My car is cheaper than a Ferrari.
big, fat, fit **+ double final consonant** (C+V+C) **+ than**	This screen is bigger than the one my TV has.
easy, healthy, friendly **~~y~~ + ier + than**	This task is easier than my last task

LONG ADJECTIVES	EXAMPLES
more + important, dangerous, intelligent, incredible, beautiful **+ than**	I am more intelligent than my brother. This issue is now more important than what you are doing.

IRREGULAR ADJECTIVES (change)	EXAMPLES
Good ..... better + than **Bad ..... worse + than** **Far ..... further + than**	If you want better results, you will have to change the software. This weather is worse than yesterday's weather.

as...(adjective)...as	EXAMPLES
as + important, easy, dangerous, smart, intelligent, incredible, slow beautiful **+ as** (con esta estructura comparamos, pero no existe diferencia alguna)	I am as intelligent as my brother. This issue is as important as what you are doing.

1. **Complete these sentences using the comparative form of the adjective in brackets.**

1. A laser printer is generally (quiet) ……..... than a low-cost inkjet printer.

2. Multi-function printers are now only slightly (expensive)-.....than conventional printers, and offer much (great).....versatility.

3. The print quality of this network printer is noticeably (good) ……than any inkjet, and as (good).....as similar laser printers.

4. The Agfa platesetter is (reliable) …….....and (easy).....to use than most printers of its type.

5. Your printer is only as (good) ……..... ..... as the paper you use.

6. The final result is always (accurate) …….....than the original image.

7. An image setter is (heavy).....than a laser printer.

8. A 3D printer is …….. than any other printer mentioned. (new)

2. **Compare the following devices and gadgets**

a. Iphone 16 – Samsung edge 50

_____

b. portable scanner – drum scanner

_____

c. desk computer – laptop

_____

d. _____

_____

Superlative adjectives

When we compare one person/ thing in relation to a group, we use superlative adjectives.

SHORT ADJECTIVES	**EXAMPLE**
The + adjective + est Fast, slow	This computer is **the** slow**est** in the lab
C+V+C → double consonant Big, fit	The new monitor is **the** big**gest** in the room
Ending in y → I + est Eassy, sunny	This is **the** eas**iest** test I've done
LONG ADJECTIVES	**EXAMPLES**
The most + adjective The least + adjective	This version is **the most** difficult to use His computer is **the least** expensive

Difficult, expensive	
IRREGULAR ADJECTIVES	**EXAMPLE**
Good → the best Bad → the worst Far → the furthest	This is **the worst** software I've ever used.

Listening 4 15 Listen to two colleagues discussing software and complete this dialogue.

Tim: What do you think about these three photo imaging packages?
Simone: It's a difficult choice. All three are very good but they have different strengths.
Tim: I agree.
Simone: Serif Image Plus has (1) _____ image (2) _____ .
Tim: OK.
Simone: But Magic Extreme has the (3) _____ processing of images.
Tim: You're right. Also, Serif has (4) _____ special (5) _____ . But what about Snap Pro?
Simone: Well, it has the (6) _____ dubbing options.
Tim: And Snap Pro is the best for (7) _____ photos.
Simone: I'm not sure. Serif has (8) _____ efficient (9) _____ .
Tim: Which is the most expensive?
Simone: Oh, Serif Image Plus.
Tim: And the cheapest?
Simone: Snap Pro.
Tim: Let's get Snap Pro then.
Simone: I'm still not sure!

2. Use these adjectives to write superlative sentences.

reliable slow expensive light fast secure useful
cheap funny entertaining fashionable heavy used
easy complicated good bad

Operating systems	
Social networking	

Web browser	
Anti-virus programs	
EXAMPLE:

Windows is **the most reliable** operating system.

1. ……
2. ……
3. ……
4. ……
5. ……
6. ……
7. ……
8. ……

3. Comparative or superlative? Complete the gaps by putting the words in brackets in the correct form.

a) I think I need a new phone. I want one with a _____ screen than my old one (big)

b) If you want to impress them, buy this tablet. It's _____ one in the store. (expensive)

c) They upgraded their computers to the ones with a _____ processor. (fast)

d) My smartwatch has really helped me to be_____than before. I move more and I'm in _____shape. (healthy, good)

e) This is _____phone I've ever used. The battery is always low and the camera takes terrible pictures. (bad)

f) Out of all music subscription services, this one is _____they have good UI, and the price is_____too. (convenient, cheap).

4. Work in groups.

Think of a gadget or some technology that most people know. Create five sentences about it using comparative and superlative structures. Make the other team guess your gadget or technology by giving them clues one by one.

Read the text. Translate the adjectives in this context.

WHICH TYPE OF PRINTER SHOULD I BUY?

L1 Printing is the final stage in creating a document. Since the results you can obtain with ***different*** types of printers will vary substantially, here is a guide to help you decide which one is most ***suitable*** for your needs.
To begin with, you should take into account that printers vary in cost, speed, print quality, and other factors such as noise or printing method. Technology is evolving so quickly that there is always a printer for every application or need.

L5 **Dot-matrix** printers use pins to print the dots required to shape a character. They can print text and graphics; *however*, they produce relatively ***low-resolution*** output – 72 to 180 dots per inch (dpi). They are used to print multi-partforms, self-copying paper and continuous-form labels. They are ***slower than*** laser printers but much ***cheaper*.**

L8 **Inkjet** printers operate by projecting **small** ink droplets onto paper to form the required image. Colour and hues are created by the precise mixing 20 of cyan, magenta, yellow and black inks. Inkjets are fairly fast, quiet, and not as expensive as laser printers. *Nevertheless,* you can still expect ***high-quality*** results because there are some inkjet printers on the market with a resolution of 2,400 dpi.

L12 **Laser** printers produce output at ***great*** speed and with a very high resolution of 1,200-2,400 dpi. They scan the image with a laser beam and transfer it to paper with a special ink powder called toner. They are constantly being improved. In terms of speed and image quality, laser printers are preferred by experts for various reasons; for instance, they have a wider range of ***scalable*** fonts than inkjets, can emulate different language systems, and can produce high quality graphics; however, they are still expensive for home users.

L17 **Thermal transfer** printers are used to produce colour images by transferring a wax-based ink onto the paper. They are popular for printing bar codes, labels and medium-resolution graphics.

L19 **Imagesetters** produce very high-resolution output (up to 3,540 dpi) on paper or on the actual film for making the printing plates. *In addition*, they are extremely ***fast*.** Imagesetters are most often used in desktop publishing (DTP). Although they produce the highest quality output, they have one important disadvantage: they are too expensive for homes or small offices.

L23 In modern lithographic printing, images are created on a DTP computer and then output directly to the printing plates, without requiring film as an intermediate step. This technology is called **computer to plate**, or **CTP**, and the machine used is called a **platesetter**.

L26 One of the most exciting developments in printing technology history is **3D printing.** It is becoming more affordable for professional and domestic users. Modern 3D printers are capable of producing 3D objects and items using **high quality resin**. Advantages: 3D prints, limitless possibilities, capacity for full customization. Disadvantages: high initial costs, high resin costs, they are still developing technology.

L30 *Finally,* we have **plotters**. Plotters use ink and **fine** pens held in a carriage to draw very ***detailed*** designs on paper. They are used for construction plans, engineering drawings and other technical illustrations. Nowadays, ***traditional*** plotters are being replaced with **wide-format** inkjets.

1. Designs and images used in magazines, books, etc. (lines 10–15) _____
2. Output quality, measured in dots per inch (lines 10–15) _____
3. A particular colour within the colour spectrum (lines 15–20) _____
4. An ink powder used in laser printers and copiers (lines 25–30) _____

5. Set of characters that can be resized (enlarged or reduced) without introducing distortion (lines 30–35) _____
6. A rectangular pattern of black lines of magnetic ink printed on an object so that its details can be read by a computer system (lines 35–40) _____
7. Surface that carries a reproduction of the image, from which the pages are printed (lines 45–50) _____
8. In-between; middle (lines 50–55) _____

GRAMMAR: PRESENT CONTINUOUS

We use the present continuous to talk about what is happening now, as a contrast to what happens with certain regularity (present simple).

- My computer **is not working** properly.
- The computer **is showing** pop-ups everywhere, how can I stop it?
- A lot of people **are working** hard today, we have a demo tomorrow.

Form: in order to form the present continuous, we use the verb to be (am, is,are) together with a main verb in the gerund form (-ing) in all forms (affirmative, negative and interrogative).

SUBJECT	**AFFIRMATIVE FORM**
I + V.to be + V. + -ing	I **am** do**ing** some paper work
He/She/ It + V.to be + V + -ing	The computer **is** show**ing** an alert on the screen
We/ You/ They + V.to be + V + -ing	You **are** fill**ing** some forms
SUBJECT	**NEGATIVE FORM**
I + V.to be +NOT + V. + -ing	I **am not** work**ing** today.
He/She/ It + V.to be + NOT + V + -ing	He **isn't** prepar**ing** a big meal
We/ You/ They + V.to be +NOT + V + -ing	They **aren't** play**ing** music
SUBJECT	**INTERROGATIVE FORM**
V. to be + I + V. + ing	**Am** I work**ing** today?
V. to be + he/she/it + V. + ing	**Is** the computer work**ing** correctly?
V. to be + we/you/they + V. + ing	**Are** they com**ing** to the meeting?

"-ing" endings:

- ✓ If a verb ends in *e*, you take off the *e* and add *–ing* → hav**e** – hav**ing** / rid**e** – rid**ing**
- ✓ If a verb ends in V + V, the *consonant* is usually *doubled* → sw**im** - swi**mm**ing / r**un** – ru**nn**ing

✓ But be careful with verbs with *more than two syllables* where the stress *isn't* on the last syllable. With those you *don't* double the consonant. → **vis**it – **vis**iting / **op**en - **op**ening

✓ If the stress *is* on the last syllable, you *do* double the final consonant. → be**gin** - begi**nn**ing

1. Order the words to form statements. Use the Present continuous.

1. we / go /later / to the cinema

_____

2. now/ they / work

_____

3. you / not / walk

_____

4. new / they / learn /things

_____

5. to work? / when / start / he /

_____

6. I / stay / why / at home

_____

7. it / get / dark

_____

8. the match /we / not win

_____

9. they / not bring / a cake

_____

10. with a ball / the dog / not play /

_____

11. it / rain / now

_____

12. meet your friends / at four / you

_____

Present simple or present continuous?

There are some signal words that can help you decide when to use the Present simple or the Present continuous.

PRESENT SIMPLE	PRESENT CONTINUOUS
Adverbs of frequency (Sometimes, never, usually, often, hardly ever) She sometimes goes shopping	Now/at the moment/ right now They're eating dinner right now
Every + hour/day/week/month/summer/year I work every day	These days / weekend/for the time being / tonight He's staying with us these days
On + week day They usually meet on Mondays.	Look!/Listen! Listen! He is singing.

Pay attention!

- ✓ There is a group of verbs which are called *state verbs* which we use for states (not actions) and we *don't* usually use these in the continuous form.

want - need - like - love - hate - prefer - believe - think - know - realise - understand - recognise - suppose - be - exist - appear - look - seem - belong - have (for possession) - own - feel - smell – taste.

1. Read the sentences and choose the correct option

1. We **have / are having** dinner at the moment.
2. **Do you see / Are you seeing** that blue car over there? It's Ben's.

3. I am all right. I **think / am thinking** about what I have to do tomorrow.
4. Sophie **thinks / is thinking** I watch too much television.
5. **Do you prefer / Are you preferring** walking to cycling?
6. I am afraid I **am not remembering / I don't remember** where we met.
7. I **am hating / I hate** cold evenings.
8. What **is this meaning? / does this mean?**
9. I **am not listening / don't listen** to the radio at the moment.
10. He **knows / is knowing** you are wrong.
11. I **always get up / am always getting up** at 6 a.m.
12. I **always lose / am always losing** my keys!
13. We **learn / are learning** about the present continuous this week.
14. The school bus **picks / is picking** me up at 7.00 every morning.
15. At the moment she **is studying / studies** Mathematics.

2. Underlined the mistake and correct the following sentences.

1. My sister ***are*** listening to music now. _____is_____
2. She go to the gym every day. _____
3. I am usually getting up at 7 a.m. _____
4. Look! The birds fly in circles. _____
5. We watches TV in the evening. _____
6. He is speaking four languages fluently. _____
7. My brother play the guitar really well. _____
8. Right now, I cook dinner, can you help me? _____
9. They don't comes to school by bus. _____
10. What do you doing over there? _____
11. He always is forgetting his keys. _____

GRAMMAR: PAST SIMPLE

We use the simple past to talk about complete actions that started and finished in the past.

- ✓ Jhon Draper **discovered** that whistle…
- ✓ He **began** hacking in 1974

Form:

In order to form statements using the simple past, we should distinguish between regular and irregular verbs. Regular verbs are those which add the suffix "-ed" to form the simple past (start → start**ed** / discover → discover**ed**). Irregular verbs are those which change their form so as to form the simple past (begin → **began** / go → **went)**

"-ed" endings

- ✓ Regular verbs ending in a **silent *e*** take **/-d/** in the simple past and past participle:
  close=close**d**
- ✓ Regular verbs ending in a **vowel + *y*** take **/-ed/** in the simple past and past participle:
  play=play**ed**
- ✓ Regular verbs ending in a **consonant + *y*** take **/-ied/** in the simple past and past participle
  (the ***y*** becomes an ***i*** followed by **/-ed/)**
  mar*ry*=mar*ri***ed**
- ✓ Special cases of the -ed forms:
- ✓ When there is a consonant after a vowel (stop, ban, open, offer...) **double the consonant:**
  stop – sto*pp***ed** ban - ba*nn***ed** swap – swa*pp***ed**

Exceptions: open - open**ed** offer - offer**ed**

- ✓ **In British English** we double the last *l* even though the last vowel is not stressed. Here are some examples:
  travel - trave*ll***ed**
  cancel - cance*ll***ed**
  level - leve*ll***ed**

Pay attention!!!

When using the simple past, the distinction between regular and irregular verbs is ONLY relevant when forming AFFIRMATIVE sentences. When we add the auxiliary verb *"did" or "didn't"* all the verbs go in their *infinitive form*.

Example: She decid**ed** to make a phone call → she **didn't** decide to make a phone call.

They went to the supermarket → **did** they go to the supermarket?

Practice

1. **Complete the text about Mary's holiday. Use the Past simple form of the verbs.**

Last summer holiday Mary ..... (go) to Miami with her . She ..... (be) very excited before the journey because it ..... (be) the first time she ..... (travel) by .

They ..... (stay) at a near the sea. The weather ..... (be) sunny and very hot. In the morning they usually ..... (go) to the .

Mary likes and the children love .

So Mary and Mum ..... (sunbathe) and the children ..... (play) with the ball and ..... (make) sandcastles. Dad ..... (swim) in the sea and ..... (read) the under the umbrella. We usually ..... (have) lunch in a near the beach. In the afternoon they ..... (visit) very interesting places. One day They ..... (go) out in a . It ..... (be) amazing!

2. Rewrite the first 4 sentences in the text in the negative form.

3. Choose 4 sentences from the text and turn them into questions.

Read the text about The Internet and mark all verbs in the past. Are they regular or irregular?

THE INTERNET originated in the early 1970s when the United States wanted to make sure that people could communicate after a nuclear war. This needed a free and independent communication network without a centre and it led to a network of computers that could send each other e-mail through cyberspace.

Tim Berners-Lee invented the World Wide Web (WWW) when he discovered a way to jump to different files on his computer using the random, or unplanned, links between them. He then wrote a simple coding system, called HTML (Hyper Text Markup Language), to create links to files on any computer connected to the network. This was possible because each file had an individual address, or URL (Uniform Resource Locator). He then used a set of transfer rules, called HTTP (Hyper Text Transfer Protocol), to link Web files together across the Internet. Berners-Lee also invented the world's first browser. This lets you locate and view Web pages and also navigate from one link to another.

The WWW became available to everyone in 1991 and the number of Internet users grew from 600,000 to 40 million in five years. Today, that number is much larger and there are now many browsers that provide Web pages, information and other services. You can also do research, download music files, play interactive games, shop, talk in chat rooms and send and receive e-mail on the WWW.

Read the article. Decide if the sentences are true (T) or false (F).

1 The Internet first started in the USA. T/F
2 The Internet and the WWW are different. T/F
3 Berners-Lee invented the Internet. T/F
4 One file on the WWW can have two or more addresses. T/F
5 There are 40 million Internet users today. T/F

Complete the sentences (1–7) with the highlighted words from the text.

1 Some people spend too much time playing _____ games on the Internet.
2 You can sometimes have a computer _____ that is not connected to the Internet.
3 It is easy to _____ around a screen with a mouse.
4 Berners-Lee discovered how to _____ links between computers in new ways.
5 Some people surf the Internet at _____, just to see what they can find.
6 People use the Internet to _____ information from one place to another.
7 When you surf the Internet, you are travelling in _____.

ON ALERT

Discuss these questions.

1. What is a hacker?
2. How easy do you think it is to infiltrate the Internet and steal sensitive information?
3. How can you protect your computer from viruses and spyware?

Text: The history of hacking.

1. Read the text and answer these questions.

1. Which hacking case inspired the film War Games?
2. When did Captain Zap hack into the Pentagon?
3. Why was Nicholas Whitely arrested in 1988?
4. How old was the hacker that broke into the US defense computer in 1989?

1971 – John Draper discovered that a whistle offered in boxes of Cap'n Crunch breakfast cereal perfectly generated the 2,600Hz signal used by the AT&T phone company. He started to make free calls. He was arrested in 1972 but wasn't sent to prison.

1974 – Kevin Mitnick, a legend among hackers, began hacking into banking networks and altering the credit reports of his enemies. He didn't expect that his most famous exploit – hacking into the North American Defense Command in Colorado Springs – would inspire the film *War Games* in 1983.

1981 – Ian Murphy, a 23-year-old known as *Captain Zap* on the networks, hacked into the White House and the Pentagon.

1987 – The IBM international network was paralysed by a hacker's Christmas message.

1988 – The Union Bank of Switzerland almost lost £32 million to hackers. Nicholas Whitely was arrested in connection with virus spreading.

1989 – A fifteen-year-old hacker cracked the US defence computer.

1991 – Kevin Poulsen, known as *Dark Dante* on the networks, was accused of stealing military files.

2. Read these landmarks in the history of the Internet and write the verbs in the past in the past simple.

- 1969 - The US Defense Department…… (establish) ARPANET, a network connecting research centres.
- 1971 - Ray Tomlinson of BBN ……. (invent) an email program to send messages across a network. The @ sign is chosen for it at meaning.
- 1981 – IBM …….. (sell) the first IBM PC. BITNET ……..(provide) email and file transfers to universities.
- 1982 - TCP/IP …….(be) adopted as the standard language of the Internet.
- 1988 - Jarkko Oikarinen …….(develop) the system known as Internet Relay Chat (IRC).
- 1991 - CERN (Conseil Europeen pour la Recherche Nucleaire) …….(create) the World Wide Web.

- 1998 - The Internet 2 network …….(be) born. It ……(can) handle data and video at high speed but ……..(be not) a public network.
- 1999 - Online banking, e-commerce and MP3 music …… (become) popular.
- 2001 - Napster, whose software allows users to share downloaded music, …….(maintain) that it …….. (not perpetrate) or encourage music piracy. However, a judge rules that Napster's technology…….. (be) an infringement of music copyright.
- 2004 - Network Solutions……..(begin) offering 100-yeardomain registration.
- 2006 - Americans …….(spend) over $100 billion shopping online.

VOCABULARY: CYBERCRIMES

Match the crimes with their definitions.

Phishing Spreading Cyberstalking Piracy

1. ……. - the illegal copy and distribution of copyrighted software, games or music files

2. Plagiarism and theft of intellectual property - pretending that someone else's work is your own

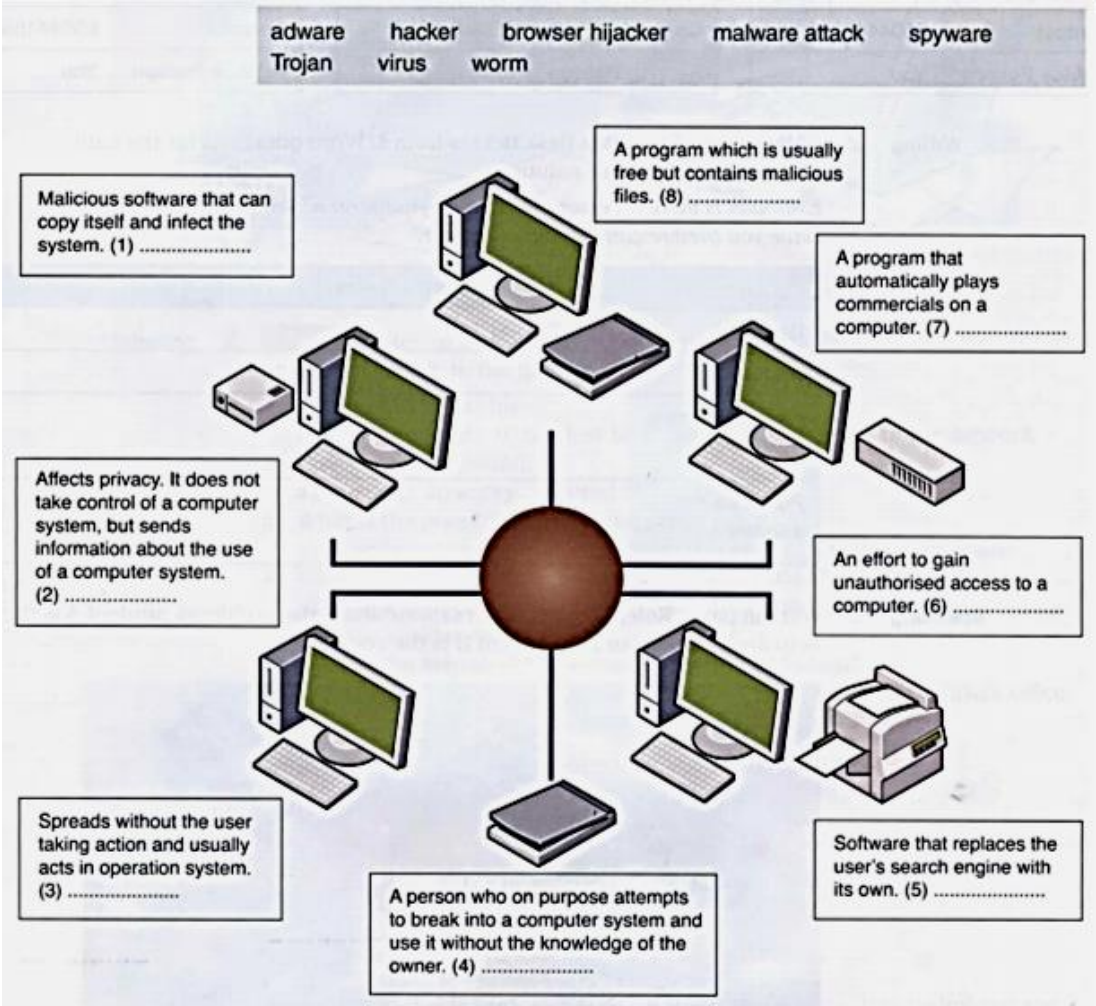
3. …….. of malicious software.

4. …….. (password harvesting fishing) - getting passwords for online bank accounts or credit card numbers by using emails that look like they are from real organizations, but are in fact fake; people believe the message is from their bank and send their security details.

5. IP spoofing - making one computer look like another in order to gain unauthorized access.

6. …….. - online harassment or abuse, mainly in chat rooms or newsgroups.

- Read the descriptions 1-8. Match the words in the box to the descriptions.



Match the security solution 1–5 to its purpose a–e.

1 a firewall	a) prevents damage that viruses might cause
2 antivirus software	b) make sure only authorised people access the network
3 authentication	c) checks the user is allowed to use system
4 username, password and biometric scanning	d) blocks unauthorised access codes
5 encryption	e) protects the system from public access

48 Listen to this dialogue and answer the questions. Ludek has asked his IT expert friend, Ales, for help.

1 Why does Ludek want Ales to check his laptop?
2 Why is Ludek worried that he may lose his project?
3 What does Ales think has happened to Ludek's laptop.
4 Why does he recommend Ludek installs an anti-spyware software?
5 Why is it important to have a network access password?
6 What will Ales do for Ludek?

SECURITY PROCEDURES

Read this text on security and match the headings in the box with the paragraphs 1–5.

Data transfer and backup	Email and network usage
Password recommendations	Reporting IT security incidents
Safety security requirements	

Systems and network security

All employees must follow security and safety procedures approved by the management.

1 _____

Only install and use software that the management has approved. Install the latest antivirus and antispyware tools.

Keep current with security software updates and patches.

Follow office health and safety standards.

2 _____

Choose a password that is difficult to guess: use between 6 and 8 characters, have letters in upper and lower case and intermix letters, numbers, and punctuation marks. Keep your password private. Change your password every 9 weeks.

3 _____

Configure your email software to use secure protocols. Use company official e-mail software only. Always double check that you are sending your message to the right recipient. Do not send sensitive data over the network. Use mail encryption to send sensitive data. Do not download unknown files or files for private use, such as movies and music.

4 _____

Transfer files via a secure connection. Back up files regularly on the server in your homefolder. Do not use external drives.

5 _____

Employees must notify their supervisor or IT help desk about any damage, misuse, irregularities or security breaches.

Match the verb 1–6 with the noun a–f.

1 transfer	a) protocols
2 install	b) software
3 follow	c) procedures
4 use	d) files
5 notify	e) an incident
6 report	f) a supervisor

1- Transfer files 4- _____

2- _____ 5- _____

3- _____ 6- _____

GRAMMAR: PAST CONTINUOUS

This tense is used to describe an action that was ongoing at a specific time in the past. It's also used to describe two overlapping actions, where one action was in progress while the other one happened.

Form: as with the present continuous, we need the verb to be and a main verb in the gerund form to form the past continuous.

AFFIRMATIVE	**EXAMPLE**
I / he / she / it + was + verb + -ing We / you / they + were + verb + -ing	**She was studying maths** **They were working at that time**
NEGATIVE	**EXAMPLE**
I / he / she / it + was + NOT + verb + -ing We / you / they + were + NOT + verb + -ing	**She wasn't studying maths** **They weren't working at that time**
INTERROGATIVE	**EXAMPLE**
Was + I / he / she / it + verb + -ing Were + he / she it + verb + -ing	**Was she studying maths?** **Were they working at that time?**

Simple past VS past continuous

The past continuous describes a longer action or situation, and the past simple describes a shorter action or event.

- ✓ When I **met** Susan, she **was having** a drink at a terrace with a friend.
- ✓ We **didn't go** out because it **was raining**.

The short action in past simple often interrupts the longer action in past continuous.

- ✓ He **was playing** football when he **broke** his arm.
- ✓ When I **went** to bed, it **was raining**.

We use the past simple for completed actions that happened one after the other. Compare:

- ✓ When he **arrived**, she **was having** a shower. (The action of having a shower started **before** he arrived)
- ✓ When he **arrived**, she **had** a shower. (The action of having a shower started **after** he arrived)

Practice

1. Choose the correct past continuous and past simple forms for the gaps below

a. After the conference, I _____ that a man _____ the walls of the building.

1. was seeing / was painting 2. Saw / was painting 3. Was seeing/ painted

11. A lightning struck the tree while we _____ _____ (watch).
12. The class was doing a test when it _____ (begin) to snow.
13. Robbie cut his finger while he _____ _____ (cut) up a pumpkin.

The Future of Cybersecurity

In the next few years, cybersecurity will become even more important. As more devices connect to the internet, hackers will find new ways to attack systems. To protect information, companies are going to invest more money in strong security solutions.

Experts believe that artificial intelligence (AI) will play a big role in the future. AI will help detect attacks faster and stop them before they cause damage. For example, some companies are already planning to use AI to monitor network traffic 24/7.

In the future, more developers will need to understand basic cybersecurity principles. If you're going to build an app, you'll also need to think about how to protect user data. Security will not be optional—it will be a key part of the development process.

Some governments are going to create new laws to make the internet safer. Others are working on international rules to fight cybercrime together. Next year, the European Union is launching a program to support cybersecurity education for young professionals.

The future of cybersecurity is full of challenges, but also opportunities. If you keep learning, you'll be ready to face what's coming. Who knows? Maybe one day you'll develop the next big tool that protects millions of users around the world.

1. Work in pairs or small groups and discuss the following questions.

1. What kind of apps will we use in 10 years?
2. Are you going to specialize in cybersecurity or another area of development? Why?
3. What do you think will happen if we don't improve cybersecurity?

GRAMMAR: FUTURE FORMS

1. Read the following sentences from the text and match them to their meaning.

1. Cybersecurity will become more important.
2. Companies are going to invest more money.

3. Some companies are already planning to use AI.
4. The EU is launching a new program next year.
5. You'll be ready to face what's coming.

A: Future plan or intention

B: Scheduled or arranged action

C: Prediction or expectation

2. Complete the chart

FORM	STRUCTURE	EXAMPLE FROM THE TEXT
WILL		
		ARE GOING TO INVEST
	BE + VERB + ING	
FUTURE EXPRESSIONS	---	

As you might have noticed, in English, there isn't one specific 'future tense.' Instead, we use modal verbs like **will** or other tenses (such as the **present continuous** or **be going to**) to express future meaning. The use of each of them depends on the meaning we want to express.

Here's a useful summary to help you know when to use each form:

Practice

1. In small groups, discuss the future on the topics bellow. Then write down 2 predictions about each of them. Be ready to share with the class!

- apps
- software development
- cybersecurity
- social media
- AI

Useful phrases for the discussion:

- ***I think (topic) will...***
- ***We're going to see...***
- ***They're already working on...***
- ***In five years, people will...***

- ***I agree with you / I don't agree with you I partially agree with you***
- ***In addition to that…***
- ***In my opinion…***

2. Choose the best form to complete the following sentences.

1. What time _____ work on Monday?

a.do you finish **b.will you finish** **c.are you going to finish**

2. _____ this weekend?

a.Do you go out **b.Will you go out** **c.Are you going out**

3. I'm sorry I made you so angry. I _____ it again

a.won't do **b.'m not going to do** **c.'m not doing**

4. It's really hot. _____ the window, please?

a.Are you going to open **b.Will you open** **c.Do you open**

5. I don't think I _____ come tomorrow.

a.'m being able to **b.am able to** **c.will be able to**

3. Complete the dialogue with the most suitable future forms: present continuous, be going to, will, or shall

Maria: What [1] _____(you/do) this evening? [2] _____ (we/go out)?

Rosa: Not this evening. I [3] _____ (work) on a project until late.
